

Nourishly Smarter Weeks. Better Meals.

Reimagining Meal Planning for Indian Households

Every Kitchen Has the Same Question

"What should we cook today?"

This decision happens every single day — three times a day, seven days a week, across every household in India. It is the most repeated, least solved question in domestic life.

Cooking Isn't the Hard Part Deciding is.

Most Indian households are filled with skilled cooks. Recipes are known. Techniques are mastered. Spices are stocked. The kitchen is not the bottleneck.

The real friction lives upstream — in the daily cognitive weight of deciding *what* to cook, *for whom*, with *what's available*, in *how much time*.

Market Opportunity

Nourishly targets a significant and growing market by addressing a daily challenge for millions of households.

Even 1% penetration of the SAM represents 600,000 households.

The Mental Work Behind Every Meal

Meal planning is **invisible work** — unrecognized, unpaid, and unstructured. It happens in someone's head, every single day, with no system to support it.

Remembering Ingredients

Tracking what's in the pantry, fridge, and what's running low — all from memory.

Managing Preferences

Balancing tastes, dietary restrictions, and moods across every family member.

Planning Groceries

Translating meal decisions into an accurate, complete shopping list.

Avoiding Repetition

Ensuring the week doesn't feel like the same three meals on rotation.

Managing Time

Matching meal complexity to realistic weekday and weekend cook windows.

Today's Solutions Are Improvised

Planning *does* exist in Indian households — but it lives entirely in informal, unstructured systems. The tools people use were never designed for this job.

Memory

One person holds the entire week's plan in their head. It's fragile and exhausting.

Habit Rotation

The same 7–10 meals cycle weekly. It works, but variety and nutrition suffer.

WhatsApp Discussions

Families negotiate dinner over chat threads. Decisions are delayed, scattered, and lost.

Last-Minute Groceries

No plan means reactive shopping — expensive, wasteful, and stressful.

❑ **The insight:** Planning already exists. It just needs structure.

Indian Meal Planning Is Harder

Generic meal planning tools are built for Western households with simpler dietary profiles. Indian households operate with a significantly more complex set of constraints — making off-the-shelf solutions a poor fit.

Veg & Non-Veg Households

Many households cook both, but manage strict separation across days, utensils, and occasions.

Jain & Religious Restrictions

No root vegetables, no onion-garlic, fasting protocols — real constraints that require specific logic.

Designated Veg Days

Monday for Shiva, Tuesday for Hanuman — dietary rules tied to ritual and culture.

Multigenerational Preferences

Children, elders, guests — each with different preferences, spice tolerances, and health goals.

The insight: Indian households require flexible, culturally-aware planning — not generic calorie trackers.

Current Apps Optimize the Wrong Things

The market is full of apps that solve *adjacent* problems. None of them solve the core problem: **making structured meal decisions easier**.

Health Apps

- Calorie counting
- Macro tracking
- Food logging

Built for fitness goals, not household planning. Require daily manual input. Add friction, not structure.

Recipe Apps

- Content discovery
- Inspiration feeds
- Bookmarking

Great for exploration, not execution. More recipes don't solve decision fatigue — they add to it.

Grocery Apps

- Fast delivery
- Reorder lists
- Convenience

Solve the *buying* step but assume you already know what to cook. Skip the planning entirely.

📌 **The gap:** No product is optimizing the **decision layer** — the weekly planning that sits above all of this.

The Missing Product

A structured weekly planning system built for Indian households.

Pantry-Aware

Plans built around what you already have at home.

Time-Aware

Meals matched to realistic weekday and weekend cook windows.

Diet-Aware

Full support for Indian dietary rules, restrictions, and rituals.

Executable

Automatically generates your grocery list and connects to delivery.

Rebuilding Meal Planning From First Principles

Before designing a solution, we asked what users actually need — stripping away assumptions carried over from fitness apps and recipe platforms.

Users do not lack recipes.

They lack **structure**. Every household knows dozens of dishes. The problem is organizing them into a coherent, manageable week.

Users do not want complexity.

They want **clarity**. A tool that adds steps, forms, and inputs will be abandoned. The system must feel lighter than the problem it solves.

Users don't want daily decisions.

They want **predictable weeks**. The goal is to front-load the decision-making once, so the rest of the week flows automatically.

THE JOB TO BE DONE

The Core Insight

Plan a full week of meals in under 10 minutes.

Using time, diet, and pantry — not just ingredients and calories. The outcome is a complete, realistic, executable week — not a list of recipes to consider.

Planning Should Feel Calm

Great product design reduces anxiety. Nourishly's core principle is that a meal planning system should create peace of mind — not add another decision surface to an already cognitively loaded day.

1

Few Decisions

Surface only the choices that matter. Automate or pre-fill everything else.

2

Clear Structure

A visual weekly calendar that shows the full picture at a single glance.

3

Realistic Meals

Suggestions that match actual cook time, available ingredients, and household preferences.

4

Executable Plans

Every plan connects directly to a grocery list. Planning leads to action, not more thinking.

INTRODUCING

Nourishly

Smarter Weeks. Better Meals.

Weekly Meal Planning

Plan breakfast, lunch, and dinner across a full 7-day calendar in one focused session.

Pantry-First Suggestions

Recommendations built around what you already have — reducing waste and shopping trips.

Indian Diet Support

Full coverage for vegetarian, Jain, veg days, non-veg exclusions, and allergy filters.

Grocery Integration

Auto-generated shopping lists connected directly to Blinkit and quick commerce platforms.

A Simple Weekly Ritual

Nourishly is designed around a repeating weekly loop — a lightweight ritual that takes less than 10 minutes and sets the household up for a calm, structured week. Consistency is the product.

📌 **The core insight:** Structure creates habit. Habit creates calm. Calm creates a better household experience — week after week.

Plan Your Week in Minutes

Nourishly's onboarding and weekly planning flow is designed to be completed in a single focused session — with no friction, no manual entry overload, and no complexity.

The average planning session takes **under 8 minutes**. Most users complete their first full week plan in their first session.

Pantry Check

Confirm what's at home — AI scanning or quick manual input.

Generate Plan

Nourishly builds a full week of meals using your pantry, diet, and time.

Adjust Meals

Swap individual meals with one tap. Personalize without rebuilding.

Buy Groceries

One-tap grocery list sent directly to Blinkit or saved for manual shopping.

Week Ready

Your household has a complete, realistic, executable meal plan for the week.

Why Nourishly Wins

Nourishly is not a recipe app with planning bolted on. It is a decision system built from the ground up for Indian households — where every product principle serves the core job: a structured, calm, executable week.

Indian-First

Designed for the real dietary complexity of Indian households — not retrofitted from Western apps.

Decision-First

Targets the root problem — cognitive overload — not downstream symptoms like discovery or delivery.

Pantry-First

Plans built around what you have, not what to buy. Reduces waste and increases adoption.

Execution-First

Every plan connects to groceries. Planning is only valuable when it results in action.

Calm Experience

Minimal decisions, clean UI, and a weekly ritual that feels lighter than the problem it replaces.

Nourishly becomes the weekly planning companion for Indian households — turning daily chaos into structured, predictable, calm weeks.

Plan once. Relax all week.
